## EDUCATION

Ph.D.: Department of Earth and Planetary Sciences, Johns Hopkins University 2018 - 2023

Dissertation: Constructing more realistic models of biogeochemical processes: Key considerations for the cryptic sulfur cycle, optics and beyond

Advisor: Anand Gnanadesikan

M.E.: College of Geosciences, China University of Petroleum 2015 - 2018

Thesis: Sedimentation evolution simulation of Baikouquan formation in Triassic in Mahu sag of Junggar Basin

Advisor: Linhao Fang

B.E.: College of Geosciences, China University of Petroleum 2011 - 2015

## PUBLICATIONS

### Peer-reviewed Journal Publications

- [1] **Jin, R.**, Pradal, M.A., Hantsoo, K., Gnanadesikan, A., St-Laurent, P. and Bjerrum, C.J., 2023. Comparing two ocean biogeochemical models of Chesapeake Bay with and without the sulfur cycle instead highlights the importance of particle sinking, burial, organic matter, nitrification and light attenuation. *Ocean Modelling*, 182, p.102175.
- [2] **Jin, R.**, Pradal, M.A., Hantsoo, K., Gnanadesikan, A., St-Laurent, P. and Bjerrum, C.J., 2023. (under review at MethodsX) Constructing a model including the cryptic sulfur cycle in Chesapeake Bay requires judicious choices for key processes and parameters.
- [3] Preheim, S.P., Morris, S., Zhang, Y., Holder, C., Arora-Williams, K. K., Gensbigler, P., Hinton, A., **Jin, R.**, Pradal, M.A. and Gnanadesikan, A., 2023. (in rev for Limnology and Oceanography) Major trends and environmental correlates of spatiotemporal shifts in the distribution of genes compared to a biogeochemical model simulation in the Chesapeake Bay.

### Manuscripts in Preparation

- [1] **Jin, R.**, Gnanadesikan, A., Pradal, M.A., St-Laurent, P. and Friedrichs, M. A. The role of colored dissolved organic matter (CDOM) in coastal ocean hypoxia.
- [2] **Jin, R.** and Gnanadesikan, A. Distributional characteristic and driver sensitivity study of global particulate inorganic carbon versus particulate organic carbon.

## RESEARCH EXPERIENCES

### **Oct 2022 – present: Studying role of Colored Dissolved Organic Matter (CDOM) in coastal ocean hypoxia**

- Used a modified absorption equation to study the effect of CDOM on hypoxia in Chesapeake Bay.
- Investigated the dynamics of nutrients, detritus, and burial across the two simulation scenarios to elucidate the factors that contribute to changes in hypoxia intensity and distribution resulting from removal of CDOM.

### **Oct 2022 – present: Distributional characteristic and driver sensitivity study of global particulate inorganic carbon versus particulate organic carbon**

- Used machine learning method to study how sensitivities to a range of environmental drivers differ for two carbon species in observations and outputs of ESMs and investigated whether ESMs correctly capture physiological mechanisms on different types of phytoplankton.

### **May 2020 – Apr 2022: Constructing an ideal model including the cryptic sulfur cycle in Chesapeake Bay**

- Incorporated a biogeochemical model with coupling between sulfur and nitrogen developed for Peru Upwelling into a nitrogen-based model for Chesapeake Bay.
- Highlighted the importance of particle sinking, burial, organic matter, nitrification and light attenuation by conducting sensitivity studies on a newly proposed baseline model.

### **Oct 2016 – Jun 2018: Sedimentation evolution simulation of Baikouquan formation in Triassic in Mahu sag of Junggar Basin**

- Established the initial sedimentary evolution model with Dionisos, a three-dimensional numerical stratigraphic forward modeling software program.
- Optimized the model of the sedimentary evolution of Baikouquan formation from 250 to 244 Ma using geological data and analyzed the sedimentary environment and facies distribution based on the predicted model.

### **Sep 2013 – Jun 2015: Optimization of drilling collar's wall thickness of quadrupole acoustic logging tool under certain geological backgrounds**

- Studied the characteristics of quadrupole acoustic source under certain geological backgrounds.
- Ran a MATLAB model to optimize drilling collar's wall thickness under certain geological backgrounds.

## HONORS & AWARDS

- 2019 E&PS Summer Field Research Fund, Johns Hopkins University
- 2018 Earth and Planetary Science Fellowship, Johns Hopkins University
- 2018 Distinguished Master's Thesis Award, China University of Petroleum
- 2017 Outstanding Graduate Student Award, China University of Petroleum
- 2016 First-class Scholarship for Elite Students, China University of Petroleum
- 2014 Honorable Mention for Mathematical Contest in Modeling

- 2013 Outstanding Student in Academics, China University of Petroleum
- 2013 Third prize for coding competition, China University of Petroleum
- 2013 Second prize for Chinese Undergraduate Mathematical Contest in Modeling
- 2012 Science and technology scholarship, China University of Petroleum
- 2011 Honorable Mention for Geological Modeling Contest, China University of Petroleum

## **PRESENTATIONS**

- 2022 AGU Fall Meeting in Chicago, Illinois, 2022: The Delivery of Colored Dissolved Organic Matter (CDOM) May Affect the Distribution and Intensity of Hypoxia in Coastal Oceans. Poster presentation
- 2022 Chesapeake Community Research Symposium in Annapolis, Maryland, 2022: Translating an Open-Ocean Biogeochemistry Code with Cryptic Sulfur Cycling to Chesapeake Bay Requires Considering the Impacts of Burial, Dissolved Organic Matter and Optics. Oral Presentation
- 2022 Ocean Sciences Meeting online, 2022: Comparing Two Biogeochemical Models in Chesapeake Bay - Distinguishing the Roles of Common Parameters from Differences in Nutrient Cycling Pathways. Oral Presentation

## **TEACHING EXPERIENCE**

- Spring 2023 Guest lecturer, Johns Hopkins University
- AS.271.107 Introduction to Sustainability (Sustainability in Chesapeake Bay) (1 lecture)
- Spring 2023 Graduate Teaching Assistant, Johns Hopkins University
- AS.271.107 Introduction to Sustainability

## **PROFESSIONAL MEMBERSHIPS**

- 2022 – Present American Geophysical Union

## **COMPUTATIONAL SKILLS**

- Coastal ocean model: ROMS
- Advanced courses in Mathematics (especially Information and Computing Science)
- Programming: C++, Fortran, Bash, Python, R
- Parallel Programming: MPI, OpenMP
- HPC batch schedulers: SLURM
- Software: ArcGIS, Dionisos, MATLAB
